

Oriented Object Programming Training Application Project

Version 0 : Building data structure and application user interface

v0.0 : Implement application business **oriented object model** (Classes)

v0.1 : Implement application **user interface** (GUI)

Version 1 : Building data querying functionalities

v1.0 : Implement data querying functions using **basic algorithms** (Conditions, Loops)

v1.1 : Replace basic algorithms with **language integrated query** expressions (LINQ)

Version 2 : Building data saving functionalities

v2.0 : Implement data saving functions using basic **text files** (.txt)

v2.1 : Implement data saving functions using **binary files** (.extension)

v2.3 : Implement data saving functions using **relational database** (SQL Server)

v2.4 : Implement data saving functions using **object-relational mapping** (LINQ to SQL)

v2.5 : Implement data saving functions using **special text files** (INI, XML, JSON)
